

RazorVision™ Interconnects

Enhance your HDTV and standard definition picture clarity

These PureAV Silver Series™ interconnects incorporate RazorVision digital enhancement technology to improve video content regardless of the display type. This represents an advance over existing high-quality digital video cables, which are designed to maintain the original content from your source and deliver it to your display without loss or interference.

PureAV RazorVision Cables provide you with the following picture improvements:

- Increased contrast with more visible details
- Brighter whites and blacker blacks
- Restored details in glare and shadows
- No edge-outline artifacts
- More image depth

How RazorVision Works

Using technology originally created for medical, industrial, and military applications, RazorVision incorporates the market's first system-on-chip, real-time, video-enhancement-integrated circuit into an active cable. Use RazorVision with new HDTVs or to upgrade the picture quality from your existing digital TV or video display. RazorVision works with all components using DVI or HDMI™ Interfaces, such as DVD players, digital video recorders, PCs, and cable/satellite boxes. RazorVision control features include Status and Level selectors, which allow you to enhance your picture according to your viewing preference. In addition, RazorVision allows you to split the screen to compare your existing picture against the enhanced RazorVision picture.

RazorVision is available in both 8- and 16-foot versions in HDMI Interface, HDMI Interface-to-DVI, and DVI Video cable formats. All come with a Belkin Lifetime Warranty.

RazorVision Control Box

1 Status Selector

Allows you to scroll through three settings: split screen (showing enhancement ON and OFF at the same time), full screen with enhancement ON, or full screen with enhancement OFF. The enhancement OFF setting allows you to bypass the enhancement function completely while still enjoying the high-quality performance of PureAV Silver Series Cables.

2 Level Selector

Allows you to select between Low, Medium, or High enhancement to suit your viewing preference.

RazorVision™ Interconnects

Enhance your HDTV and standard definition picture clarity

RazorVision Digital Video Cables: HDMI Interface, HDMI Interface-to-DVI, and DVI Dual-Link Cables

99.99% Oxygen-Free, Solid-Copper Conductors and High-Purity, Silver Solder Joints

- Drastically reduce signal distortion for unrivaled audio and video clarity

Silver-Plated Conductors

- Deliver best high-frequency response for optimal resolution

Precision-Formulated, Polyethylene Dielectric Material

- Maintains stronger signals that yield superior sonic and video accuracy

Quad-Shielding

- Isolates from outside noise for superior clarity

Impedance-Matched Construction

- Reduces loss and increases bandwidth

Ferrite Inductor Blocks

- Protect against unwanted interference

Integrated Strain Relief

- Protects against wire damage for consistently high-quality video

Abrasion-Resistant, Flexible PVC Jacket

- Maintains integrity, even when bent

24k Gold-Plated Connectors

- Create precise contact for low loss

Non-Slip Rubber Grip and Integrated Color-Coding

- Provide comfort and ease of install
